3D Printed Coffee Tables

NYXO

9 CAMELIA

13 AZALEA

17 DALIA

21 FELCE

Primavera is a collection of sculptural coffee tables made with 3D printed lightweight foaming bioplastic. Primavera explores this new material technology, which literally flourishes in the form of an iconic family of pieces that evokes the floral world and the circularity of the seasons.

Organic and fluid shapes combined with a geometric regularity that symbolizes the regeneration of natural cycles. A feast of bold colors, sinuous geometries, delicate curves that celebrate the new life of the material.

The patterns of each pieces evolve along the height, gaining complexity from the base to the top and reinforcing the pieces.

CAMELIA

Camelia's sassy curves give a fresh yet romantic personality to this piece of furniture inspired by the botanical emblem of love.

A feminine soul expressed in a peaceful beauty with a contemporary twist.

Three-dimensional and dynamic, the evanescent texture and distinctive graphic note of Camelia express passion and gracefulness.

AZALEA

Charming but poisonous: this flower-inspired table is defined by a labyrinthine surface meant to portrait the abundance of the voluminous Azalea blooms. A continuous flow of lines ground the table to the floor in an harmonious manner. Sibylline enchanter with a dark side, Azalea is a twisty and eye-catching piece of design with a distinctive personality.

DALIA

The central void is the focal point from which the sinuous rays draw a graceful and continuous pattern. The top is contoured by precise curves flowing into delicate hues. The dense outline of the petals gives strength and elegance composing an overall delicate harmony.

Dahlia flower is a timeless symbol of elegance and purity. Shadows, overlaps, curves: the elaborate geometry intrigues the eye with emotional perspective effects.

FELCE

The body of the table rises in an intricate fresh green spiral. The ribs bend as if slightly moved by the wind in a mesmerizing swirl. The top pattern is defined by wavy curves reminiscent of plant fronds. This design piece is inspired by the fern, the oldest plant existing on earth. Its primordial charm has inspired countless popular beliefs, mysteries, esoteric meanings. A rich heritage celebrated with a dynamic and lush furniture piece.

Lightweight materials for Fused Granulate Fabrication (FGF)

Our production partners share a focus on sustainability and are working on advanced materials to pave the way towards a more sustainable additive manufacturing industry. The Lightweight (LW) PLA is the first material of its kind using active foaming technology to achieve lightweight, low density parts. This technology leads to a production that requires less material.

NYXO

NYXO Visionary Design is an architecture and product design studio founded in 2015 by Mirko and Michele Daneluzzo. NYXO is a trans-disciplinary R&D office for the development of visionary ideas, specialized in 3D printing and in the application of digital computational tools.

The types of projects range from limited editions to serial products, from architectural concepts to interiors and art installations at the service of multiple industries and collaborating with a number of international companies including Haier Group, Berkel Group, Officine Sandrini, Fly Synthesis.

NYXO's work has been exhibited at Dubai Design Week, the Venice Architecture Biennale, the Beijing Biennale, Singapore Design Week among the others. Our Primitive Knife is part of the permanent collection of the Cooper Hewitt Museum in New York.

COLOSSUS

Colossus, an innovative and application driven large-scale 3D printing company located in Belgium, is known for its gigantic FGF printers available as transportable units, and their unique focus on recycled materials.

By constantly expanding their material portfolio this agile company is showing the possibilities of a new production landscape while providing their customers with the latest and most innovative materials optimized for Colossus Printers.

Colossus is already known to work closely together with many of the large material manufacturers, but this new high-profile partnership with colorFabb has an ambitious and unique purpose of bringing the lightweight material range to a larger platform.
